

# Cabling and Infrastructure Installation

---

## CABLE ENGINEERING SERVICES

---

In addition to LAN engineering services, Just Right is also able to provide cable engineering services. This service takes into account the architectural requirements of the LAN. Our engineers carefully select the right cable types and cable routing that meets local building constructions codes and fire laws. We will do all wiring including the physical layer of switches, routers, wireless access points, and handle any network management tools associated with these devices.

### Features

---

- Cable plant installation and certification
- Infrastructure configuration
- Project management
- Professional Expertise
- Site Construction (environmental, electrical supply, cable installation, cabling solutions)
- Wireless Expertise

### Benefits

---

- Highest reliability and performance
- Low cost
- On-time completion of cabling projects
- Compatibility with all industry LAN products
- Single point of contact
- State of the art cable plant technology
- Designs to allow easy growth
- Most cost-effective use of cabling plant
- Comprehensive documentation

---

## LAN ENGINEERING SERVICES

---

Just Right LAN (Local Area Network) Engineering Services will provide specifications for a LAN which meets the customer's operational and business requirements. By learning the business requirements and the goals of each company, Just Right is able to design a LAN that will allow for expansion with little or no disruption to the business.

### Features

---

- Hardware requirements
